

Everything is new - nothing has changed!

As of now EmpirBus is initiating a part number change transition. This is based on EmpirBus being a Garmin company and to align the EmpirBus product structure with other Garmin products. The transition will be over a rolling period and will affect most of the parts in the EmpirBus product line.

IMPORTANT! All products are identical in hardware/software - the only difference is part number and serial number structure.

The previously used serial numbers has been renamed to **UID** and will be the identifier over NMEA and in the EmpirBus Studio software.

Products not noted in the cross-reference list will not be changed at this stage.

If you need assistance locating the products, please contact order@empirbus.com.

Cross reference table to be found at: https://www.empirbus.com/wp-content/uploads/Part-number-change_Rel-191008_publ.pdf

Together with this change there are a few items that are being treated as 'non stocked' items.

These will still be available, but not kept on stock. Lead time will be longer and, in some cases, will there be an MOQ.

The affected products are noted in the cross-reference table (yellow).

The switch panel SP-12 will be updated and there will be new part numbers for the replacement products.

As a result of this update the buttons have been changed. All existing buttons will be available, but it is important to inform for what part number any buttons are purchased.

New buttons will all start with **306** XXXX, compared to the old ones starting with **206** XXXX.

As a result of increased prices on raw material we have been forced to make price adjustment on some EmpirBus items. Updated prices will take effect as of November 1st. To receive new price list, please contact order@empirbus.com.

Thank you all for your confidence in EmpirBus. We promise to stay creative!

Magnus Jirhem
Managing Director, Garmin Sweden Technologies AB
